

## About Us

Ressis Co. (No-Andishan Ertebat Amn-e Rassis) was established in 2016 with the aim of providing the highest quality services and the most advanced equipment in field of Information Technology and communications. This company has consistently endeavored to enhance the efficiency and effectiveness of its clients' businesses.

In this regard, we have successfully established strong presence among top rivals by leveraging professional technical personnel, providing comprehensive solutions, direct imports and also maintaining transparent responsiveness.

Ressis Co. is a member of the Iranian ICT Guild organization and also holds certifications from both AFTA and the Informatic Council.

Ressis is committed to providing cutting-edge information security infrastructure. In line with this commitment, we have introduced our proprietary product for security patch updates, known as Rassis Plus, thereby making significant strides towards becoming a knowledge-based organization. This initiative stands as a testament to the company's advanced technical expertise and its development-oriented approach.

Furthermore, the provision of distinctive services such as 7/24 support, delivery of ticketing system and the establishment of Customer Service Department signify that customer satisfaction is paramount importance to us.

**We are committed to being our best, establishing trust and a sense of security based on stable connections is cornerstone of our framework, rather than just motto.**

## Mission of Ressis

The mission of Ressis is to effectively protect the data of individual and organizations. By providing the latest and most advanced solutions in cybersecurity, we strive to create a secure and reliable environment for facilitating sustainable digital communication.

## Vision of Ressis

As a prominent organization in cybersecurity, our vision is to emerge as a reference point for similarly developing enterprises in Iran and across the globe.

## Ressis Support Services

Ressis Co. has enabled access to the support portal for all customers with the aim of improving service quality as well as facilitating communication with clients. This powerful tool is well-suited for managing support requests.

Various levels of support are provided based on the services type and customer needs, as detailed below:

### Free support for all clients

Offline license warranty is provided through ticketing system (5 x8). All customers utilizing online license will automatically be entitled to 7/24 monitoring service. This service includes monitoring and circumvention services provided to users of online licenses.

### Level One Support

This service is designed to provide management and operational services for firewalls and is delivered through ticketing portal (5x8). In fact, level one support meets up to %90 of IT team's needs.

### Level Two Support

This service is designed for advanced offerings that require network analysis and inspection. The services provided at level Two encompass firewall services and related devices, which are tailored to meet customer needs and delivered through the ticketing portal. (5x8) Note: level Two support includes level One services.

### 24/7 Support

This service is designed for clients who require ongoing support that includes both level One and level Two support. It is accessible through the ticketing system and continuous monitoring. This service is provided in accordance with the terms of the contract.

## RESSIS Plus

In today's context, due to sanctions and the substantial expenses associated with acquiring online licenses, updating and upgrading the firewall security features have presented significant challenges for enterprises deploying firewalls in Iran.

Moreover, leveraging unreliable methods for updating firewalls may result in device blockage, leading to significant losses in both time and resources.

By the way, procuring accounts from the parent company will not be feasible for most enterprises due to currency fluctuations, sanctions and high cost associated with the update process.

Through collaboration of the technical, software as well as research & development teams, RESSIS Co. has embarked on the design and development of the RESSIS Plus software.

RESSIS Plus has the capability to update the security features of all FortiGate and FortiWeb models.

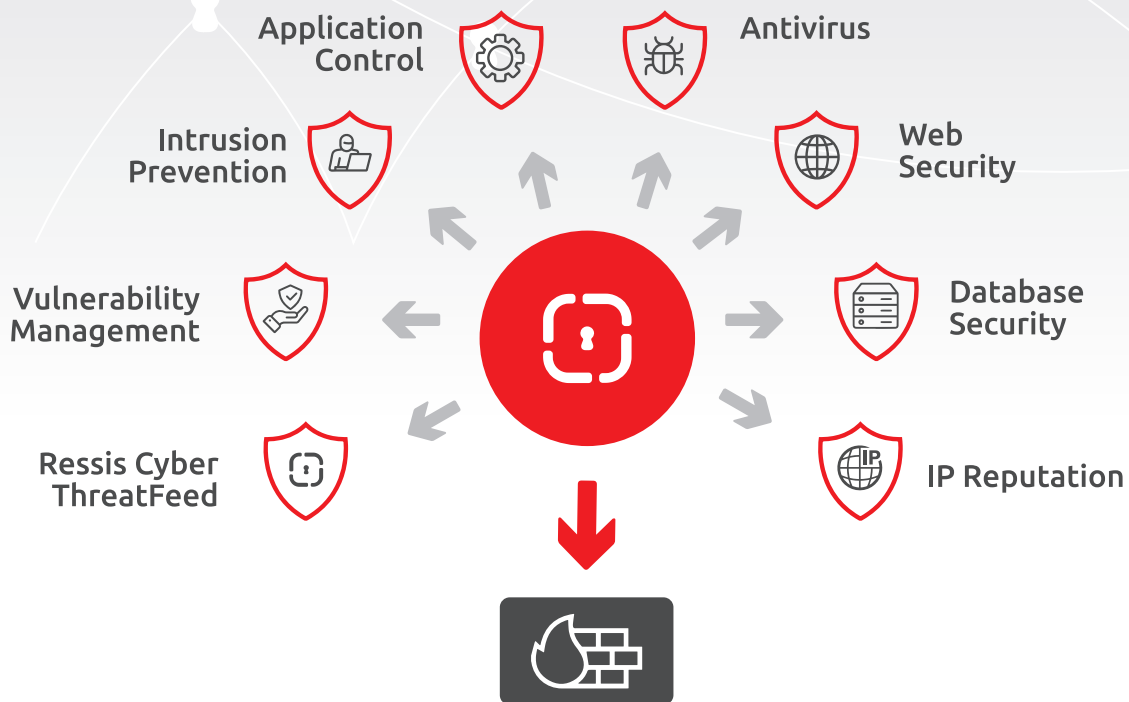

Supported firmware versions for RESSIS Plus on FortiGate include: ,6.4 ,6.2 ,6.0 ,5.6 ,7.4 ,7.2 ,7.0, and 7.6.

Supported firmware versions for RESSIS Plus on FortiWeb include: ,6.2 ,6.1 ,6.0 ,5.6 ,7.4 ,7.2 ,7.0 ,6.4 ,6.3, and 7.6.

## Some of the Ressis Plus features:

- ⌘ Automated and intelligent downloading of necessary files for all device
- 🔴 Automated and intelligent updating of next generation firewalls and web application firewalls security database
- ⌘ Automated backup of firewall configurations
- 🔴 User-friendly software platform designed for high efficiency in device management
- ⌘ Updating all security modules provided by parent company at no extra cost
- 🔴 Updating without necessity for firewalls to be connected to the Internet
- ⌘ Capable of deployment within protected networks (isolated and secure)
- 🔴 Access to security features specifically designed for industrial networks
- ⌘ Substantial mitigation of the device blockage risk
- 🔴 Capability for schedule of software processes execution
- ⌘ Provision of original and unaltered security updates files
- 🔴 Significant mitigation of waste in human resources and financial assets
- ⌘ Updating the IP database for all countries, including Iran.
